Missing Skills	24

Resume Skills

bert, computer vision, generative ai, github, java, machine learning, nlp, python, pytorch, tensorflow, transformers

Job Description Skills

aws, bert, ci/cd, computer vision, deep learning, docker, embeddings, faiss, fastapi, gemini, generative ai, git, github, google cloud, java, kubernetes, langchain, linux, llamaindex, llm, machine learning, mongodb, nlp, openai, prompt engineering, python, pytorch, rag, scikit-learn, sentence transformers, sql, streamlit, tensorflow, transformers, vector database

Matched Skills

bert, computer vision, generative ai, github, java, machine learning, nlp, python, pytorch, tensorflow, transformers

Missing Skills

aws, ci/cd, deep learning, docker, embeddings, faiss, fastapi, gemini, git, google cloud, kubernetes, langchain, linux, llamaindex, llm, mongodb, openai, prompt engineering, rag, scikit-learn, sentence transformers, sql, streamlit, vector database

Overall Feedback

The resume demonstrates strong foundational AI/ML skills but lacks many specific tools and platforms crucial for this role, resulting in a low match score of 33%.

Strengths

- Solid foundation in core AI/ML areas including Python, PyTorch, TensorFlow, NLP, Computer Vision, and Generative AI.
- Experience with key models like BERT and Transformers is a good starting point for modern AI roles.
- Proficiency in Java and GitHub are valuable assets.

Missing Skill Analysis

- Significant gaps exist in cloud platforms (AWS, Google Cloud), which are often essential for deploying and scaling ML solutions.
- Lack of MLOps and deployment experience (Docker, Kubernetes, CI/CD, Linux) suggests limited exposure to production environments.
- Crucial modern LLM ecosystem skills are missing, including specific frameworks (Langchain, LlamaIndex), models (OpenAI, Gemini), and techniques (RAG, Embeddings, Prompt Engineering, Vector Databases).
- Missing experience with data management (SQL, MongoDB) and API development (FastAPI) indicates potential limitations in full-stack ML application development.

Resume Improvements

- Quantify and add specific experience with cloud platforms (AWS, Google Cloud) if applicable, detailing projects and services used.
- Integrate MLOps tools (Docker, Kubernetes, CI/CD) into project descriptions to showcase deployment capabilities, specifically in a Linux environment.
- Highlight any experience with LLM-specific frameworks (Langchain, LlamaIndex), vector databases (Faiss), prompt engineering, RAG, and working with APIs from models like OpenAI or Gemini.
- Include any database (SQL, MongoDB) or API development (FastAPI) experience to demonstrate broader software engineering skills.
- Explicitly list 'Git' and 'Deep Learning' and 'Scikit-learn' as skills, and mention any work with Streamlit or Sentence Transformers if applicable.

Application Recommendation

Not a strong immediate match. Recommend significant resume updates demonstrating experience in the missing critical skills before applying.
